

End-of-life Care

Relevant articles from MA Healthcare journals to support your staff's education and practice

July 2018

End-of-life care requires compassionate care of the highest standard from health professionals, as well as a broad range of knowledge and skills. Carers must deal with a range of issues, such as: pain management, sensitive cultural practices, emotionally assisting patients and their families, and making complex ethical decisions. We have provided a list of relevant articles from MA Healthcare journals dealing with this area, thereby providing your NHS staff with research, information and tips that will support both their work and the quality of life of their patients
