1. Using technology to support the emotional and social well-being of nurses: A scoping review
Author(s): Webster, Natalie L; Oyebode, Jan R; Jenkins, Catharine; Bicknell, Sarah; Smythe, Analisa
Source: Journal of Advanced Nursing; Jan 2020; vol. 76 (no. 1); p. 109
Publication Date: Jan 2020
Publication Type(s): Literature Review Journal Article
Available at Journal of advanced nursing - from Wiley Online Library Medicine and Nursing Collection 2019 - NHS
Technology may offer a sustainable and accessible means of providing support for nurses who find it difficult to communicate in person due to time pressures at work. It is important that the psychological well-being of nurses is seriously addressed as more nurses are now leaving than joining the profession. Online interventions may offer a sustainable and accessible means of providing support for busy nursing staff who have difficulty finding time to communicate with one another face-to-face.
Database: BNI

2. The caring experience in multiple sclerosis: Caregiving tasks, coping strategies and psychological well-being
Author(s): Bassi, Marta; Cilia, Sabina; Falautano, Monica; Grobberio, Monica; Negri, Luca; Niccolai, Claudia
Source: Health & Social Care in the Community; Jan 2020; vol. 28 (no. 1); p. 236
Publication Date: Jan 2020
Publication Type(s): Journal Article
Available at Health & social care in the community - from Wiley Online Library Medicine and Nursing Collection 2019
Findings suggest that caregiving tasks are not solely detrimental to well-being, but they may also provide a positive contribution through the adaptive coping strategies supportive engagement and positive reframing. Findings also highlighted task-specific areas that could be targeted in intervention in order to effectively lighten burden and promote well-being among caregivers.
Database: BNI

3. Assessing the value for money of an integrated health and wellbeing service in the UK.
Author(s): Visram, Shelina; Walton, Nick; Akhter, Nasima; Lewis, Sue; Lister, Graham
Source: Social Science & Medicine; Jan 2020; vol. 245
Publication Date: Jan 2020
Publication Type(s): Academic Journal
These results suggest that the Wellbeing for Life service offered good value for money. Further research is needed to systematically and comprehensively determine the societal value of similar holistic, asset-based and lay-led approaches. • Lay health workers are widely used to deliver health and wellbeing-related services. • These services can represent good value for money. • Targeting disadvantaged groups also offers potential to reduce health inequalities.
Database: CINAHL
4. Emotional Wellbeing.
Author(s): Sayer, June
Source: Positive Health; Jan 2020 (no. 259)
Publication Date: Jan 2020
Publication Type(s): Periodical
The article discusses emotional well-being and how grief affects people throughout their lives. Topics covered include several definitions of grief and its stages, homeopathic remedies that can be associated with grief and explanations on why they are chosen, and a variety of ways and how people deal with grief.
Database: CINAHL

5. Expert by Experience Involvement in Mental Health Research: Developing a Wellbeing Brochure for People with Lived Experiences of Mental Illness
Author(s): Tapsell A.; Martin K.M.; Moxham L.; Patterson C.; Burns S.; Perlman D.
Source: Issues in mental health nursing; Jan 2020 ; p. 1-7
Publication Date: Jan 2020
Publication Type(s): Article
PubMedID: 31916868
The purpose of this brochure was to provide strategies for maintaining wellbeing for EBES, after attending a psychosocial intervention. Brochure development was guided by a mixed-methods research design, using a survey and focus group. The findings illustrate five key themes in EBES strategies for maintaining wellbeing: good sleep hygiene, regular physical activity, maintaining a healthy lifestyle, relaxation techniques and social support. This process paper demonstrates how collaborating with experts by experience represents a valuable approach for developing mental health research and resources.

6. An exploration of how community-dwelling older adults enhance their well-being
Author(s): Waterworth, Susan; Raphael, Deborah; Gott, Merryn; Arroll, Bruce; Benipal, Jagpal; Jarden, Aaron
Source: International Journal of Older People Nursing; Dec 2019; vol. 14 (no. 4)
Publication Date: Dec 2019
Publication Type(s): Journal Article
Available at International journal of older people nursing - from Wiley Online Library Medicine and Nursing Collection 2019 - NHS
Nurses can play a central role in supporting older adults who may be at risk of lower well-being. Nurses can do this by developing interventions to enhance well-being and ensuring better person-activity fit of strategies and practices. Our findings support the need for nurses to be involved in providing opportunities for older people to discuss well-being to support the development of individual, as well as community, models of well-being.
Database: BNI
7. No straight lines - young women's perceptions of their mental health and wellbeing during and after pregnancy: a systematic review and meta-ethnography.

Author(s): Lucas, Grace; Olander, Ellinor K.; Ayers, Susan; Salmon, Debra

Source: BMC Women's Health; Dec 2019; vol. 19 (no. 1)

Publication Date: Dec 2019
Publication Type(s): Academic Journal

Available at BMC women's health - from BioMed Central
Available at BMC women's health - from Europe PubMed Central - Open Access
Available at BMC women's health - from ProQuest (Health Research Premium) - NHS Version
Available at BMC women's health - from Unpaywall

The synthesis concludes that health and social care professionals need to reflect on the operation of power and stigma in young women's lives and its impact on wellbeing. It adds to understanding of young women's mental health and wellbeing during and after pregnancy as located in physical and structural factors rather than individual capacities alone.

Publication Date: Dec 2019
Publication Type(s): Academic Journal

Six meaningful subscales emerged, which can help health professionals identify and address areas in which women with diabetes are experiencing psychosocial difficulties. The revised scale provides a feasible instrument to be tested for psychometric properties in a larger sample.

Database: CINAHL
10. Personality and wellbeing in people living with a chronic wounds.
Author(s): Dudfield, Leith; Upton, Penney; Upton, Dominic
Source: Wounds International; Dec 2019; vol. 10 (no. 4); p. 12-16
Publication Date: Dec 2019
Publication Type(s): Academic Journal
People living with chronic wounds face substantial challenges to their wellbeing, including stigma, psychological stress, malodour, treatment regimens and social isolation. Considerable research has highlighted the impact of personality on general health and there is emerging evidence that personality (particularly the trait ‘neuroticism’) can have considerable influence on the wellbeing of someone living with a chronic wound. Consequently, the authors recommend that treatment plans consider personality, since this has the potential to facilitate new interventions to improve wellbeing that are more tailored to an individual’s needs.

16. Supporting farmers’ mental health and wellbeing though periods of uncertainty: a mixed-methods study
Author(s): Davies, Alisha R; Grey, Charlotte N B; Homolova, Lucia
Source: The Lancet; Nov 2019; vol. 394 ; p. S46
Publication Date: Nov 2019
Publication Type(s): Conference Proceedings
Available at The Lancet - from Unpaywall
The evidence from the review and engagement are brought together to create an action framework for supporting farmers that is particularly relevant during times of increased uncertainty. Support should be two-fold: to prevent the effects of uncertainty to farming business; and to protect farmers’ mental health and wellbeing with early prevention, awareness-raising, and normalisation of mental health in agriculture. Interventions could build upon existing initiatives, using an outreach-based model and peer-to-peer delivery, widening access to farming family members and including Welsh language provision. Funding Welsh Government European Transition Fund.

Database: BNI
17. Employment status and impact on mental wellbeing in the UK working age population: a cross-sectional analysis

Author(s): Gray, Benjamin J; Grey, Charlotte N B; Homolova, Lucia; Jiao, Song; Davies, Alisha R

Source: The Lancet; Nov 2019; vol. 394 ; p. S44

Publication Date: Nov 2019

Publication Type(s): Conference Proceedings

Available at The Lancet - from Unpaywall

Interpretation Precarious employment is associated with components of poorer mental wellbeing. However, the strongest associations for low mental wellbeing are observed in currently unemployed people. To understand and explore these complex relationships in greater detail, longitudinal research is required. Funding None.

Database: BNI

18. Exploring the effect of the hospital gown on wellbeing: a mixed methods study

Author(s): Cogan, Nicola; Morton, Liza; Georgiadis, Emmanouil

Source: The Lancet; Nov 2019; vol. 394 ; p. S32

Publication Date: Nov 2019

Publication Type(s): Conference Proceedings

Available at The Lancet - from Unpaywall

These findings suggest that hospital gowns might contribute towards patients experiencing an increased sense of exposure, discomfort, disempowerment, and embarrassment at a time of potential vulnerability while undergoing medical intervention, emphasising the importance of challenging cultural norms in health care. Dehumanising aspects of care, as symbolically represented by the hospital gown, might adversely affect patient wellbeing and increase distress. Funding None.

20. From Burnout to Well-Being: A Focus on Resilience.

Author(s): Mahmoud, Najjia N; Rothenberger, David

Source: Clinics in colon and rectal surgery; Nov 2019; vol. 32 (no. 6); p. 415-423

Publication Date: Nov 2019

Publication Type(s): Journal Article Review

PubMedID: 31686993

Prevention of burnout should start early in training with appropriate modeling and input from mentors and should incorporate stress management strategies. The most compelling data for building resilience requires institutions, physicians, and their support staff to align their values to create a mutual culture of wellness and engagement. It is imperative that institutional and national reform allows us as physicians to preserve our relationships with patients and colleagues, while also prioritizing time to reflect and pursue outside interests that recharge and restore.

32. Effects of dignity therapy on dignity, psychological well-being, and quality of life among palliative care cancer patients: A systematic review and meta-analysis

Author(s): Xiao, Jinnan; Chow, Ka Ming; Liu, Yunhong; Chan, Carmen WH

Source: Psycho-Oncology; Sep 2019; vol. 28 (no. 9); p. 1791

Publication Date: Sep 2019

Publication Type(s): Journal Article Evidence Based Healthcare

Dignity therapy is a promising approach to improve psychological well-being among patients with cancer under palliative care. However, the effects of dignity therapy on dignity and QoL are inconsistent. Further extensive studies should measure the impact of dignity therapy through qualitative and quantitative approaches to establish outcomes in psychological well-being. Studies with sensitivity to the cultural context within which dignity therapy applied should be conducted to explore its effects on patients with cancer at the early stages of illness trajectory.

Database: BNI

33. How do "robopets" impact the health and well-being of residents in care homes? A systematic review of qualitative and quantitative evidence

Author(s): Abbott, Rebecca; Orr, Noreen; McGill, Paige; Whear, Rebecca; Bethel, Alison; Garside, Ruth; Stein, Ken; Jo Thompson-Coon

Source: International Journal of Older People Nursing; Sep 2019; vol. 14 (no. 3)

Publication Date: Sep 2019

Publication Type(s): Evidence Based Healthcare Journal Article

Engagement with robopets appears to have beneficial effects on the health and well-being of older adults living in care homes, but not all chose to engage. Whether the benefits can be sustained are yet to be investigated. Implications for practice: Robopets have the potential to benefit people living in care homes, through increasing engagement and interaction. With the robopet acting as a catalyst, this engagement and interaction may afford comfort and help reduce agitation and loneliness.
